Abstract

This report describes an implementation of vocabulary strategies designed to increase reading comprehension. The targeted population consists of inner city elementary students located in central Illinois. Research shows that some children from low-income environments have below average reading abilities.

Analysis of probable cause data revealed that students are failing to meet their optimal levels of reading performance. Students need to increase the number of words that they can read and understand automatically in order to increase reading comprehension. Prior knowledge and interest in the topic affects students' comprehension of the text. Difficult vocabulary affects reading comprehension. Some urban children lack reading materials that relate to their background. Failure in reading causes failure in school.

A review of solution strategies suggested by experts, combined with an analysis of the problem setting, resulted in the selection of the following intervention: improving students' knowledge of vocabulary to increase reading comprehension by using graphs, charts, games, journals, and portfolios.

CHAPTER 1

PROBLEM STATEMENT AND CONTENT

Problem Statement

The students of the targeted elementary population exhibit a lack of vocabulary development as demonstrated by standardized tests, teacher observations, portfolios, and student journal entries. Vocabulary scores correlate with reading comprehension and intervention in this area is likely to have positive influence on overall comprehension scores.

Immediate Problem Context

This action research project takes place in one primary school, in the inner city, of a midwestern city. The targeted classrooms will be identified as A, B, and C. Classrooms A and B serve children with learning disabilities/behavior disorders and those who are educable mentally handicapped in a self-contained setting. Room A is a second/third grade room. Room B is a third/fourth grade room. Classroom C is a fourth grade regular division room with 23 students.

This study will be conducted in a pre-kindergarten through fourth grade school. The original three-story brick structure was built in 1924. A two-story twelve room addition was constructed in 1958 to increase student enrollment to 725 kindergarten through eighth grade students. This figure is based on an occupancy of 30 students per room. In the fall of 1985 the district reorganized the make-up of elementary schools. The buildings were changed to pre-kindergarten through fourth grade (primary schools) and fifth through eighth grade (middle schools). All of the hallways and rooms in the new addition have tiled floors. The remaining rooms have wooden floors and high ceilings. The gymnasium also serves as a lunchroom and an auditorium. The library is the only carpeted room in the building. The office and the teachers' lounge are the only air-conditioned areas. All the rooms have windows for ventilation. All classrooms are occupied, therefore special education staff meetings, grade level meetings, and other small group meetings are held in the boiler room. The asphalt playground is fenced with a small wood chip covered area that contains a jungle gym and monkey bars.

The school has a population of 508 students of which 2% are Mexican-American, 21.7% are Caucasian, and 76.4% are African American. Of this population 83% are low income. The schools attendance is 93%, with a student mobility of 42% (State School Report of 1995). An average class size is 24 students. The majority of the students walk to and from school daily. Three

buses transport the remaining students and there is a special bus to transport the special education kindergarten students.

The faculty and staff of this site consists of one principal, one newly assigned assistant principal, 23 regular division teachers, six special education teachers, one speech pathologist, one art teacher, one music teacher, one gym teacher, and three teaching assistants. The remaining staff includes one secretary, one part-time secretary, one librarian, two custodians, and six cafeteria workers. The staff of this site are 92% female and 96% Caucasian.

Many special programs are included at this site. A latchkey program is offered by a local organization. This program provides child care services before and after school for working parents. A parent group is organized each year to help with fund-raisers and volunteer services. Numerous after-school clubs are offered at this site. Some of theses clubs include art club, drama club, tumbling, computer club, and basketball. Girl Scouts and 4H hold weekly meetings in the gym.

School District

In this school district of 15,803 students, the average class size is 18.6 with an operating expenditure per pupil of \$5,860.00 (State School Report of 1995). This district includes four high schools, twelve middle schools, fourteen primary schools, one early childhood education center, six special

schools, one alternative school, one magnet school, and one gifted school(School Directory, 1997).

The ethnic background of the district's student population is as follows: 49% African-American, 46.9% Caucasian, 1.8% Mexican-American, 1.8% Asian, and 0.1% Native-American. The low income population within the district is 54% and the limited English proficiency population is 1.5%. The mobility rate is 33%, and the attendance rate is 91.8%. The high school drop-out rate is 14.6% with a chronic truancy rate of 6.9% (School Report Card 1996).

The district employs 1,027 teachers with an average salary of \$35,427.00. Of this number 76.6% are female and 23.4% are male. The ethnic background of the teacher population is as follows: 92.1% Caucasian, 7% African-American, 0.4% Hispanic, 0.4% As an, and 0.1% Native-Americans. The average administrator salary is \$60,115.00 (School Report Card 1996).

Community

This school community is located in the center of a midwestern city which is midway between two of the nation's largest cities, approximately a three hour drive from either. The target city has a population of 113,504 people (1990 Census of Population and Housing).

This city has three hospitals, one of which is a trauma center. It has a private university, business college, a two year community college, and a medical school. A civic center and

the headquarters of a major production company are located downtown. Many cultural and recreational activities are also available through the park district.

The research site is situated in a low income neighborhood of 10,064 people, with 33% below poverty level. The surrounding homes of this community are made up of 60% rental units. The average household income is \$26,000.00 with 60% of these having female head of household. Six percent of the population does not have telephones (1990 Census of Population and Housing). The average employment rate of persons 16 years and older is 57%. Within the population, 74% are high school graduates and 19% have had four years of college (1990 Census Of Population and Housing).

Regional and National Context of the Problem

Students' lack of prior knowledge and information about the world in general poses problems in language and vocabulary development. Students with delayed language skills develop these skills in a normal sequence, but their skills are delayed enough to place them behind their peers in academic achievement (Leverett and Diefendorf, 1992).

Current evidence of problems with reading on a national level comes from the National Assessment of Educational Progress (NAEP). In April of 1995 this national organization revealed the most recent scores for elementary age children. Students in three grades in 39 states were tested. Less than a third of these students were proficient in reading, and only two to five

percent were reading at advanced levels. This research also indicates that although middle class children do show some reading deficits, children from low-income and disadvantaged households are severely affected (McPike, 1995). In "Learning to Read: Schooling's First Mission" the editor of American Educator Magazine states that the ability to read is central to living a fulfilling life. If a child does not learn to read fluently, broadly, and reflectively across all content areas, the chances for academic success, financial success, the ability to find interesting work, personal autonomy, or self-esteem are almost non-existent (McPike, 1995).

Stahl, Jacobson, Davis, and Davis stated in 1989, "there is a long history of research showing that vocabulary difficulty affects reading comprehension" (p.30). Children with vocabulary comprehension problems are often unaware of the difference bet een understanding and failing to understand. Even when they are aware, they rarely ask for help (Dollaghan and Kaston, 1992).

The at-risk reader experiences difficulties with sight word vocabulary, word analysis, reading fluency, vocabulary knowledge, and comprehension of text. Most of these deficiencies come from limited language and reading experiences in the child's environment. The students who demonstrate any of these efficits eventually suffer from low self-esteem and a disinterest with reading. At-risk readers need a supportive reading environment along with instructional strategies which use quality, high interest literature to promote reading growth and enjoyment. A program in which literature is read orally by the teacher prior

to rereading activities can encourage experiences which will raise self-esteem, promote an enjoyment of reading, and address a variety of reading needs (Marlow and Reese, 1992).

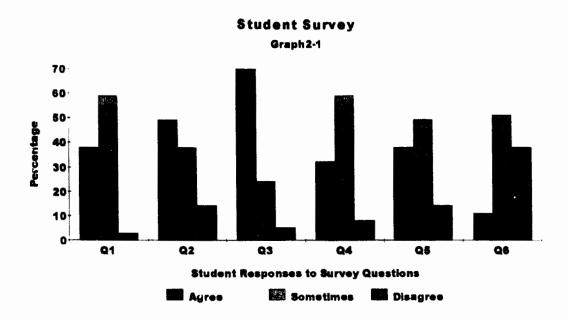

CHAPTER 2

PROBLEM DOCUMENTATION

Problem Evidence

The evidence to document that the lack of vocabulary development causes problems with reading comprehension was gathered by assessing parent and student surveys and administering a reading inventory and pretests.

The following is a graph representing results of student surveys given to all three classes (Appendix A). These surveys were given prior to the sixteen week intervention period. The students responded to the statements by circling agree, sometimes, or disagree. The results reflect the students interest in reading.

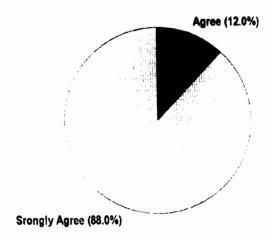

The survey consisted of the following statements:

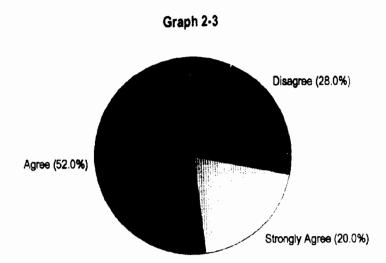

- 1. I like to read for fun.
- 2. I like being read to.
- 3. I enjoy going to the library.
- 4. I like reading at school.
- 5. I like reading at home.
- 6. I would rather read than watch TV.

Parent surveys were distributed and collected from all three targeted classrooms(Appendix B). The surveys contained five statements to which the parents could respond by circling strongly agree, agree, disagree, or strongly disagree. The following pie charts display the results of parent responses to the statements.

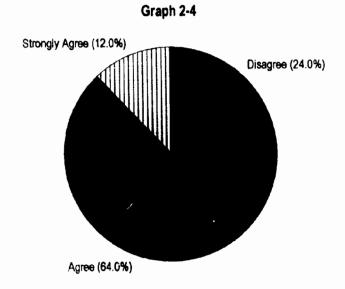

Graph 2-2

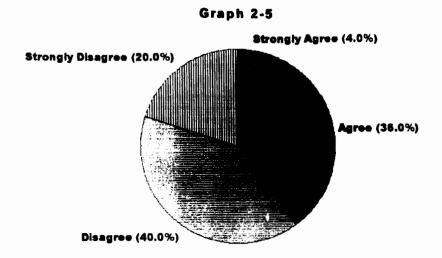

Statement 1. It is important to have reading materials available in my home.

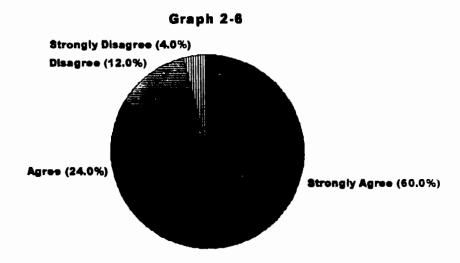

Statement 2. My child is excited about reading.

Statement 3. My child chooses to read books by him/herself.

Statement 4. I have a difficult time getting my child to read a book at home.

Statement 5. I would like to see my child read more.

In the first week of the action project, the researchers individually administered the *QRI Reading Inventory*. This tool

measures reading abilities. The test ranges from pre-primer up to level six. Each student begins the test one level below his assumed reading ability. He reads a passage and answers comprehension questions asked by the teacher. Students answers are scored which determines if he is at the independent, instruction, or frustration level. If an independent level is scored the next level is given. If a frustration level is scored the test below is given. Our goal with this test was to identify a student's instructional level. The chart below designates the instructional reading levels for each child in the targeted classrooms.

Probable Causes

Irwin (1991) stated the following:

Expanding students' meaning vocabulary is a critical part of making sure that they have adequate background knowledge, and because word meanings are learned best when learned in terms of their associations with other concepts, it is

probably best to think of expanding prior knowledge and building vocabulary simultaneously. (p. 136-137)

A problem for many students is the lack of sufficient vocabulary knowledge. These students are often labeled educationally at risk (Nagy, 1988). According to some researchers children increase their vocabulary knowledge by acquiring on an average of 3,000 words per year (Brett, Rothlein, and Hurley, 1996).

Marlow and Reese (1992) state:

At-risk readers experience difficulty with sight word vocabulary, word analysis, reading fluency, oral miscues, vocabulary knowledge, or comprehension of text. These deficiencies stem from a lack of language and reading experiences in the child's environment as well as from the child's lack of information about the world in general.

The student's development of prior knowledge is particularly important for students with poor reading skills. Texts need to be of high interest to the student and must activate students prior knowledge (Dechant, 1991). If there is a lack of prior knowledge it is the teacher's role to teach the material and fill in the gaps. Failure in reading comprehension may also result when the language of the author differs from the language of the reader.

When the school's values are different from the values of the home environment, some difficulties are likely to occur.

According to Bountress (1994), the linguistic variations of low

socioeconomic-level African-American children are ungrammatical, illogical, and poor approximations of standard English, and that they are reflective of linguistic impoverishment resulting from genetic and environmental influences. (p. 10-11) Other researchers say that when children do not have the relevant background they do not learn "naturally," the seamless and organic way that teachers have been led to expect (Williams and Woods, 1997).

Even though a child comes from a middle class family he does not escape reading problems. Children need to be immersed in print, conversation, and games to have a better chance for academic and cognitive growth (McPike, 1995).

Some researchers believe that reading comes naturally; however, due to the lack of early organized instruction many students are not reaching their reading potential. According to Honig (1996) an estimated 30% to 40% of students in many high-poverty areas are remaining nonreaders, and significantly more than 50% of students in these areas are not becoming fluent readers of grade appropriate materials. (p. 5) Consequently, they will stumble over many words that will prevent them from attending to meaning, and they will be unable to participate in grade-level instruction and will fall further and further behind during their school careers.

Students who fail to be immersed in extensive in-school and home reading will be limiting their knowledge about the world, the depth of their conceptual understanding, and their vocabulary (Honig, 1996). It is important to have classrooms filled with a

variety of multi-level reading materials. Materials above the student's reading levels should be read to them with follow up discussion (Honig, 1996). "Reading a lot" is one of the most powerful methods of increasing fluency, vocabulary, and comprehension, and becoming educated about the world (Stanovich as cited by Honig, 1996, p. 112).

Prior knowledge and vocabulary knowledge are connected to each other. A person who knows a great deal about a topic generally knows words specific to that topic (Anderson and Freebody as cited by Stahl, Jacobson, Davis, and Davis, 1989, p.30). For example, a student who knows the meanings of livestock, bales, crops, and trough will know the theme discussed will be about a farm. The student who doesn't know these words will not understand the content of the story.

Another problem that compounds vocabulary deficits is the underachievement of many students in today's society. Rimm (1997) defines underachievement as:

Underachievement is a discrepancy between a child's school performance and some index of the child's ability. If children are not working to their ability in school, they are underachieving.

Evidence of underachievement was discussed in the 1996 Carniegie Corporation's resent report, <u>Years of Promise</u> as cited by Rimm (1997). The report states:

Make no mistake about it: underachievement is not a crisis of certain groups: it is not limited to the poor: it is not a problem afflicting other people's

children. Many middle- and upper-income children are also failing behind intellectually. Indeed, by the fourth grade, the performance of most children in the United States is below what it should be for the nation and is certainly below the achievement levels of children in competing countries (p. 18).

By teaching vocabulary, students will improve their reading comprehension and therefore, become more motivated to achieve.

Chapter 3

THE SOLUTION STRATEGY

Literature Review

In <u>Making Sense</u>, Chapman (1993) stated the following comparison:

Reading is like apple pie. Few dislike it, but opinions vary about the right ingredients for the crust, whether tart or sweet apples are best for the filling, and how long the pie should bake. Similarly, there are different views about what the ingredients of reading are, what needs to go into it for the best outcome, and how long it should take before the results can be enjoyed. (p. 3)

Some researchers believe the key ingredient of reading is the correlation between vocabulary and comprehension. Klein (1988) states that vocabulary is a crucial component of effective reading comprehension. He continues to suggest that other than early sight word instruction, students need to apply skills in these four areas:

 Phonics- Children need the skills to decode new words.

- Structural Analysis- Children need to be able to break down larger words into smaller parts and should recognize root words, prefixes, and suffixes.
- Contextual Analysis- Children use context clues in a sentence to determine an unknown word.
- 4. Supplemental Reference- Children must be comfortable using certain tools such as a dictionary and thesaurus to discover the meaning of unknown words.

Teaching direct vocabulary is necessary when words represent concepts crucial for understanding of a text or knowledge of a topic. The meanings of the words and the correlation of those meanings to other words must be correctly understood (Chapman, 1993). To improve comprehension teachers need to specifically help the child understand the meanings of the vocabulary words and relate them to the content of the story (Beck & McKeown, 1988).

There are various ways in which teachers can effectively increase their students' vocabulary. First, immerse students in a lot of reading. Second, teach students how to use context clue: to figure out the correct usage and meaning of a word. Third, use direct instruction to teach words that are appropriate for a subject area.

The reason for directly teaching vocabulary words is to make sure that students understand the concept the word star is for, how it relates to other correpts, as how the meaning of the word

changes in different contexts. Simply defining a word and using it correctly in a sentence does not adequately demonstrate understanding (Chapman, 1993).

Most techniques for teaching reading vocabulary can be identified as direct formal instruction (DFI) models. Because these models are consistent and remain the same over a period of time, they will be used in an ongoing manner. Although they may be used in any of the reading phases, they tend to be most beneficial in the prereading phase (Beck & McKeown, 1988). Other techniques and activities can be used to support DFI strategies which reflect creativity and variety. The consistency of these techniques allows the teacher to create a scope and sequence of reading vocabulary and vocabulary instruction throughout the year.

Although reading authorities argue about what the best DFI models are, most see the need for at least some direct instruction in their reading program. Klein (1988) suggests the following as an example of a DFI model used for teaching vocabulary in the prereading phase:

- 1. Look at the word and pronounce it. There are a variety of ways the word can be presented to the students: in the text, on the board, or on an overhead.
- 2. <u>Define the word</u>. Provide a definition that is appropriate for the meaning used in the text.
- 3. <u>Dissect the word</u>. Identify the root word along with its prefix or suffix.

- 4. <u>Discuss the word</u>. This step allows for the greatest flexibility. The teacher must adjust the strategies and activities according to the students' needs.
- 5. <u>Use the word in context</u>. Instruct the students to use the word appropriately in a sentence.

According to Honig (1996), there are myths concerning whole language. Some of the leaders of the whole language movements have argued against the inclusion of explicit skills development instruction, claiming that explicit instruction is unnecessary and even harmful.

The first myth suggests that children learn to read naturally. Proponents of this theory believe that explicit decoding instruction, controlled vecabulary, and direct instruction are not necessary. Whereas Honig believes that in order for children to achieve their reading potential, early, direct instruction needs to be taught (Honig, 1996).

Conversely, another myth is that organized, explicit phonics programs result in rigid teaching. Some lessons incorporate the use of low level activities that may not be related to the needs of the student. Explicit phonics creates boring and repetitive lessons Honig, 1996). One example would be worksheets.

The end product for vocabulary development is that students will be able to relate and reuse these words in situations that apply. Teachers need to provide situations that allow for the learned word: to be transferred for use in everyday life.

Project Outcomes and Solutions Components

As a result of implementing vocabulary development during the period of September through December 1997, the three targeted classrooms will show an increase in reading comprehension as measured by a reading inventory, pretest and posttest, student journals, and portfolios. In order to accomplish the objective, the following processes are necessary:

- Parent and student surveys will be distributed and collected.
- 2. A positive reading atmosphere will be created.
- 3. The *Qualitative Reading Inventory-II* will be administered in September and December.
- 4. Weekly reading lessons will be developed.
- 5. Portfolios will be created.
- 6. A parent letter will be sent home with each child outlining the action research and its goals (Appendix D).

In order to achieve the end results, the following processes are necessary.

- Compare pretest and posttest scores to determine growth in vocabulary and reading comprehension
 (Appendices E, F, and G).
- 2. Measure students' growth by evaluating portfolios.
- 3. Keep weekly vocabulary lists in journals.
- 4. Implement numerous charts, graphs, games, and activities to increase knowledge of vocabulary.

Action Plan for the Intervention

This action plan is presented in a weekly outline format. This allows each teacher participating in the research project flexibility in her classroom. The time frame for this intervention begins September 2, 1997 as week one, and ends December 12, 1997 which is week 15.

Week 1

- Send home parent reading surveys and action research letter.
- 2. Orally administer student reading survey.
- 3. Pass out and explain use of journals.
- 4. Explain the purpose and process of using portfolios.
- 5. Administer the QRI- I to each student.

Week 2

- 1. Pretest
- 2. Introduce story one.
- 3. Discuss vocabulary words.
 - a. Web the vocabulary words (Appendix H).
 - b. Look up definitions in dictionary.
- 4. Orally read story to students.
- 5. Use paired or individual reading to find unknown words for fournal.
- 6. Play "Go Fish" with vocabulary words.
- 7. Students read the story orally.
- 8. Use a sequence chart (Appendix I).
- 9. Send home homework.

- 10. Review vocabulary.
- 11. Using the sequence chart the students will create their own book to retell the story.
- 12. Posttest

Week_3

Repeat reading activities 1-5 from week 2

- 6. Play "Concentration" using vocabulary words.
- 7. Orally read the story as a group.
- Complete an information chart to discuss story
 (Appendix J).
- 9. Send homework home.
- 10. Show comprehension of story by using the cloze exercise.
- 11. Posttest

Week 4

Repeat reading activities 1-5 from week 2

- 6. Play "Taboo" with vocabulary words.
- 7. Read the story as a group orally.
- 8. Complete a question matrix to discuss the story (Appendix K).
- 9. Send homework home.
- 10. Complete an expository writing to show understanding of the story.
- 11. Posttest

Week 5

Repeat reading activities 1-5 from week 2

6. Play "Roll and Define".

- 7. Students read the story orally.
- 8. Complete a PMI chart in small groups (Appendix L).
- 9. Homework will be sent home.
- 10. Use "What if" questions.
- 11. Posttest

Week 6

Repeat reading activities 1-5 from week 2

- 6. Play "Baseball"
- 7. Orally read the story as a group.
- 8. Use fat and skinny questions (Appendix M).
- 9. Send homework home.
- 10. Make a flip book to identify parts of the story.
- 11. Posttest

Week 7

Repeat reading activities 1-5 from week 2

- 6. Make puzzle pieces using vocabulary.
- 7. Orally read the story as a group.
- 8. Create a Venn diagram (Appendix N).
- 9. Send homework home.
- 10. Make an accordion book to retell the story.
- 11. Posttest

Week 8

Repeat reading activities 1-5 from week 2

- 6. Play a vocabulary game of students' choice.
- 7. Orally read the story as a group.
- 8. Complete the frame (Appendix O).

- 9. Send homework home.
- 10. Use higher order thinking skills.
- 11. Posttest

Week 9 - Week 15

Repeat weeks 2-8

Week 16

Re-administer student surveys and the *QRI-II*All of the targeted classrooms will be excluded from the intervention process for one week because of mandatory state testing.

Chapter 4

PROJECT RESULTS

Historical Description of Intervention

The objective of this intervention was to improve reading comprehension by developing vocabulary knowledge. The implementation of story-related activities, vocabulary games (Appendix P), and graphic organizers were selected to improve reading comprehension.

To enhance the importance of reading, positive sayings were displayed on bulletin boards. In addition to reading the weekly stories, the teacher read novels to the students and the students had additional time to read library books silently.

On Monday, the researchers gave a teacher-created vocabulary pretest to the students. Then researchers decided to introduce the story by connecting to the students' prior knowledge. Next, the teacher orally read the story to the students so they would become familiar with the text. Finally, the vocabulary words were taught. Each student wrote definitions in a journal.

On Tuesday, the students were reintroduced to the story by reading to an assigned partner. If the partners found words they did not recognize, they recorded them in their journals for later discussion. Next, they played a vocabulary game as a

group. Each week, the students played a variety of games and activities (Appendix P) to familiarize them with the story vocabulary.

On Wednesday, the students reviewed the vocabulary words. Then they read the story to the teacher who facilitated discussion by asking comprehension questions about the story. If time permitted a vocabulary game was played. On Thursday, a weekly graphic organizer was chosen from The Cooperative Think Tank I or The Cooperative Think Tank II (Appendices H- O) to enhance story ideas and concepts. A homework assignment was sent home that related to what was done in class.

Finally on Friday, the students took a posttest to show growth in the areas of vocabulary knowledge and story comprehension. After the tests were corrected, each child was able to see his grade and ask questions regarding his mistakes.

Graphic organizers were used weekly to enhance the comprehension and sequencing of the story read. The teacher facilitated a discussion in which the students completed a sequence chart. Using this chart the students made an accordion book, flip-book, or a student created book. This activity allowed the students to demonstrate their understanding of the story.

The information chart was used to teach students how to ask questions that gather information (Bellanca, 1992). In small groups the students generated six questions pertaining to the story for each "wh" question (who, what, when, where, and why) and the teacher recorded them on the chart. Next, each student

rolled a die for each "wh" question. The number from the die was matched to the question on the chart. Then the teacher changed the questions into statements that were used to develop a cloze exercise.

A question matrix enabled the students to compare and contrast attributes, qualities, or characteristics of people in the story (Bellanca, 1992). The students compared a character from the story to a character from a popular TV show, movie, or another story by answering a series of questions. Then they wrote a short paragraph using the question matrix.

Plus, Minus, and Interesting Questions (PMI) were used to help students evaluate and extend understanding about facts, concepts, thinking processes, and cooperative interactions (Bellanca, 1992). After the students read a story, the teacher put a PMI chart on an overhead projector. The students discussed suggestions for each letter on the PMI chart and responses were recorded. The students formulated "what if" questions from the PMI chart that were answered individually.

Fat and skinny questions were used to teach students the differences between factual questions and complex thought questions (Bellanca, 1992). The teacher put some examples of fat and skinny questions on the overhead and demonstrated the difference between the two. Then the students created their own set of fat and skinny (Appendix M) questions about the story. The questions were shared and answered in cooperative groups.

A Venn diagram helped the students to visualize likenesses and differences in two or more objects, characters, or situations

(Bellanca, 1990). Students used this graphic organizer to compare and contrast characters, stories, or settings.

The frame was another tool that the students used to sequence story events (Bellanca, 1992). Once the frame was completed the teacher asked questions about the story using Higher Order Thinking Skills (HOTS). In cooperative groups the students answered the questions by referring to the frame.

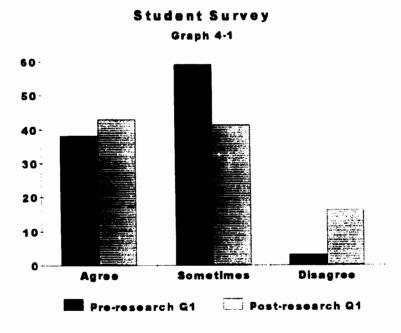

In classrooms A and B the reading groups, which each consisted of five students, were conducted at a small table. The other children were participating in reading at another table with a teacher assistant.

In classroom C the lesson begins with the students in their seats, while the teacher gives instructions for the activity.

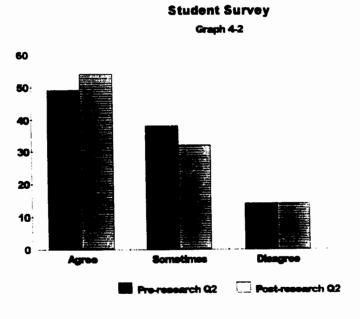

Then the students divide into cooperative groups to complete the assignment.

Presentation and Analysis of Results

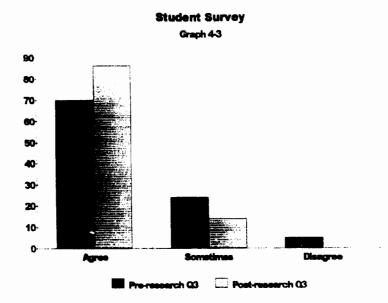

The students responded to six statements that reflected their reading interests. The following graphs illustrate the results of these statements from pre and post student surveys that were completed in August and December.

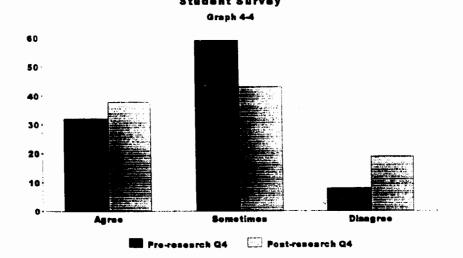

1. I like to read for fun.

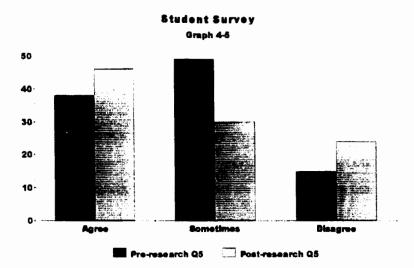

2. I like being read to.

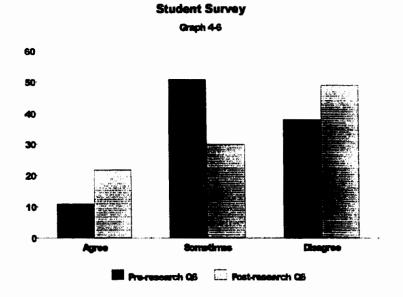

3. I enjoy going to the library.

4. I like reading at school.

5. I like reading at home.

6. I would rather read than watch TV.

Graphs 4-1 through 4-e illustrate that for some children e joyment of leading has increased; however, the percentages reveal that reading is not highly regarded by the students.

Graphs 4-1, 4-4, and 4-5 show that overall more than 50% of the students do not enjoyed reading; however, graph 4-2 reveals that over 50% of the students enjoyed being read to. Graph 4-3 displays that 85% of the students enjoy going to the library. This percentage may be misleading because the students not only read books in the library but also played games on computers.

The intent of the survey was to reveal stidents' interest in reading. This survey gave the researchers information which validated the need for the intervention.

The following charts display the results of students' baseline data compared to the post data for the QRI Reading Inventory.

Chart 4-1

QRI Reading In	ventory	y Baselin	e Data
	Grade 2	Grade 3	Grade 4
Below Pre P imer	1	1	
Pre Primer		2	
Primer			1
Level 1		1	2
Level 2			1
Level 3			3
Level 4			3

Chart 4-2

QRI Reading	Inventory	Post	Data	
	Grade 2	Grade	3 Grade	4
Below Pre Primer			.,	
Pre Primer				
Primer	1	1		
Level 1		2		
Level 2		1		2 .
Level 3				3
Level 4				3
Level 5				2

The results of the QRI, as illustrated in Charts 4-1 and 4-2 clearly indicate an improvement of at least one reading level in the sixteen week intervention period.

In August the results of the students' reading levels ranged from below preprimer to level four. Post intervention results revealed that significant improvements were made. Most students gained a reading level, increasing the range from primer to level five.

The following charts represent the results of weekly pretests, posttests, and vocabulary comprehension sentences. These scores are based on percentages.

Pre - Pretest Post - Posttest Comp - Comprehension ~;

The results of the vocabulary pretests and posttests validated the researchers' assumptions that the students' lack of vocabulary knowledge affected their comprehension of the story. The students were given a pretest in which they matched story vocabulary to the correct meaning. The action plan was implemented throughout the week. Then the students took a posttest of the vocabulary words and used those words to create sentences that related to the story. There was a dramatic improvement between the pre and post vocabulary tests and a steady increase in the scores of the vocabulary comprehension sentences throughout the intervention.

Conclusions and Recommendations

The researchers chose this topic for an intervention because previous test scores from norm-referenced tests revealed that there was a deficit in students' reading comprehension. Also, teachers have observed that students have limited prior knowledge and access to real life experiences that connect with the reading material being presented. Researchers administered the QRI Reading Inventory which established a baseline of students' reading comprehension levels. After determining a need for this intervention, the teachers in classrooms A,B, and C began to implement their plan of action.

Within this action plan the researchers felt that certain strategies were essential to maintain student motivation and interest of the students. The students were grouped cooperatively for games and activities which reinforced

vocabulary and comprehension skills. Students were exposed to the text a minimum of three times to enhance knowledge of the story. Graphic organizers and hands-on activities allowed the students to become familiar with the text. Using these strategies the researchers observed that the students began internalizing and understanding the stories.

Overall the action plan was successful; however, it was difficult to complete as scheduled. For example, some stories were longer than others and therefore needed more time. Also, the intervention period was disrupted by two holiday breaks and mandated testing. We were not able to test those weeks.

One area of the intervention that proved difficult for the students was creating comprehension sentences using their vocabulary words. In classroom A the students dictated the sentences to the teacher. At first some students dictated the definitions instead of a sentence. In time, these students were able to express well thought out sentences. In classroom B, the students dictated the sentences to the teacher and progressed into writing their own sentences. This researcher noticed an improvement in students' ability to relate vocabulary words to the story; however, one student who dislikes writing withdrew and wrote definitions instead of sentences even though he knew the meaning of the word. In classroom C, the students wrote comprehension sentences. This researcher observed that in the beginning some students failed to write sentences because they didn't know the definitions of the vocabulary words. Within time

the researcher noticed that the students began writing longer and better developed sentences that related to the story.

As special education teachers in classrooms A and B, one element we would change would be to include the Woodcock Johnson in our baseline data. This test would better define vocabulary knowledge and reading comprehension than the QRI Reading Inventory. For classroom C, a regular division classroom, I would prefer to use the Iowa Test of Basic Skills (ITBS) instead of the QRI Reading Inventory because this would give a better indication of the students' reading ability. I would compare their third grade ITBS scores to their fourth grade scores which are given at the beginning of the school year.

Prior to the intervention, the researchers used tests that were taken from the basal series. The teachers from classrooms A and B felt that these tests did not address students' individual needs. By using teacher created tests, the students' needs were met (Appendix G). Therefore we will continue using teacher created tests.

Our role as teachers has changed because of this intervention. We have shifted from direct instruction to facilitated instruction. This allowed the students to take on a more active role in their learning.

Teachers in classrooms A, B, and C felt that the students have not only gained academically, but socially as well. The students have shown that they can have fun learning by working cooperatively. The activities and strategies set forth in the

action plan kept the students attentive and excited about reading. They enjoyed playing the games and making artifacts.

The researchers were confident that they achieved their goal. Overall the students' reading improved, motivation increased, as did comprehension and vocabulary knowledge.

Saint Xavier University Consent to Participate in a Research Study Improving Reading Comprehension Through Vocabulary

Dear Parents.

This year your child's teacher is enrolled in a master's program to further his/her education. As part of the requirements for the program, a research project needs to be completed. We will be working on vocabulary skills to increase reading comprehension. This study will not get in the way of your child's learning, but will improve it. We are excited to see the improvements the children will be making in reading. The results of the study will not be shared with unauthorized personnel. Your child's name will not be used anywhere in the study. If you agree to allow your child be a part of our study, please sign the consent below and return it to school as soon as possible. Thank you for allowing us to educate your child.

Mr. Berg

Mrs. Pfanz

Mrs. Cressman

I give my permission for my child to be included in the research conducted by his/her teacher for the school year 1997-98. I understand all information gathered during the study will be completely confidential

To hook the students interest of the vocabulary words, the following fun and creative games were played:

- 1. Go-fish: The vocabulary words and definitions were written on cards. These cards were distributed equally to the players and the remaining cards were placed in a pile. A player asks another player if he/she has the definition/word to match the card in his/her hand. The player with the most matching pairs wins.
- 2. Concentration Game: The vocabulary words and definitions were written on cards. The cards are all lined up face down on the table. A player turns over two cards and orally reads each card. If they match, the player keeps the cards and picks again. When all the cards have been chosen, the player with the most pairs wins.
- 3. Taboo: The players are divided into two teams. One player from a team is given a vocabulary word. He/she is allowed fifteen seconds to describe the word verbally or with gestures. If his/her teammates guess the word, that team gets a point; however, if his/her teammates do not guess the word, the other team can guess and receive the point. After all the words are described the team with the most points wins.
- 4. Roll and define: The vecabulary words and definitions are written on cards. A game board is chosen. Each player chooses a different colored marker. Then, a player chooses a card. If its the word, he/she must read the word

correctly. If, its the definition, he/she must state the correct word. If a correct response is given, the player can roll the dice and move his/her marker that many spaces. If an incorrect answer is given, the turn is missed. The first player to the finish wins.

- 5. Baseball: The vocabulary words and definitions are written on cards. Divide the players into two teams. Each team chooses a colored marker. A playing field is drawn on the chalkboard, overhead, paper, etc.. One team is up to bat, while the other team is in the outfield. A player from the team up to bat, picks a card from the pile. If its a word, the team decides on the definition. The outfielders must decide if the answer is correct or incorrect. If the player read the word correctly, he/she got one base. If, the player read the word correctly and stated the definition correctly, he/she the team gets two bases. Three mistakes/strikes and the team is out. Then the teams switch places. The teacher keeps score on the board.
- 6. Puzzle: The teacher cuts construction paper into rectangles that are then cut into two pieces. Then the students write the word on one half and the definition on the other half. The student mixes all the pieces up and tries to put them back together.
